PROFESSIONAL SUMMARY

Computer Science student with an interest in Software Engineering and DevOps, with experience in software development and in working on various technical projects. Strong interest in automation, CI/CD, cloud infrastructure, deployment, and the development of scalable and reliable software systems. Possesses a problem-solving mindset and an eagerness to keep learning, with a focus on building quality software and improving the efficiency of development processes and workflows.

WORK EXPERIENCE

Software Engineer | Polda NTB

January 2026 – February 2026 | Mataram, NTB

- Developed 3 Laravel-based information systems for Polda NTB operational needs, including a personnel leave system, activity planning, and police reports for Ditres PPA PPO.
- Handled the software development lifecycle from planning and development through testing to deployment, including the adoption of Docker and CI/CD with GitHub Actions.
- Developed a police reporting system used at both the Polda and Polres levels.

Freelance Software Engineer | Bekum Biro

February 2026 – April 2026 | Mataram, NTB

Logistik Polda NTB

- Developed a new information system to replace the previously used personal equipment management system.
- Developed and deployed the application with Laravel and Docker based on the users' operational needs.

Freelance Software Engineer | Devema Clinic & Implant Center

June 2026 – August 2026 | Mataram, NTB

- Developed a landing page and a clinic information system for recording patient treatments, doctor fees, attendance, and payroll.
- Built and deployed a Cloudflare Native application with Hono, Cloudflare Pages & Workers, D1, and R2.
